# Small Business Networking:

As it relates to small business network the concepts are similar to home networking, except for the hardware devices used. For home networking this is more affordable and the devices used are cheaper in comparison to business networking devices. With the current market trends for technology things are expensive; we do our best to provide our customers/clients with the MOST affordable prices, by doing this they're able to run their businesses on a manageable budget.

For small businesses, things are more refined and detailed so as to meet expectations…tighter security, better hardware devices, software and maintenance are needed for total success. CLS will make recommendations so as to improve efficiency and safe money for the journey ahead, services offered: 1. Hardware and software installations 2.Configurations 3. Cable installations (Cat5e) 4. Computer upgrades 5. Computer Repairs.

CLS: "Providing you with cutting edge solutions"
